

JAYDEN ALONZO-ESTRADA

AI Services, Cybersecurity, and Software Engineer

Grand Junction, Colorado | 8084915116 | jayden.alonzoestrada@gmail.com | jaynuke79.github.io/Portfolio

TECHNICAL SKILLS

Python & C	TypeScript & React	AI Agent Orchestration	AI/ML Modeling
Zero Trust Principles	System Architecture	Backend Services & REST APIs	SecOps
Risk & Compliance Mechanisms	AuthN & AuthZ Systems	Testing & Evaluation Automation	Project Management

PROFESSIONAL EXPERIENCE

AI Services Intern, EggNest.ai, Grand Junction, CO Oct 2025 — Present

- Evolved the advanced HubSpot connector into a deep CRM integration covering 11 object types — from contacts and deals to tickets, meetings, and notes — paired with write actions and UAT agents so Glean can both inspect and act on records.
- Took a customer Zoho Desk connector from foundation to customer-driven production: sync model, support-ticket indexing, custom-field auto-discovery across record types, task-scoped documents, and URL-resolution fixes.
- Orchestrate AI agent pipelines across the full development lifecycle — codebase audits into structured GitHub issues, implementation, regression testing against live dev APIs, and PR merges — shipping 168 commits and 26,000+ lines across 408 files in one month.
- Standardized org-wide connector development by extending ConnectorLib with shared agent skills and commands (e.g., /sync-readme), an org-wide project-sync workflow, and a canonical label scheme.
- Shipped multi-manager scheduling and audience-group systems for the EggNest Portal and scoped service-delivery automation (closed-deal workflow, project-engagement summarizer agent).

Field Technician, Greenflare Technologies, Denver, CO Oct 2024 — Present

- Repair and maintain high-throughput compute systems, restoring nodes and improving production hardware uptime.
- Diagnose bottlenecks via packet captures and targeted tests, boosting network throughput by ~20% in high-traffic areas.
- Implement systematic troubleshooting playbooks for recurring issues, reducing mean time to resolution on field calls.

Software Engineering Intern, JGMS Government Services, Grand Junction, CO Jun 2025 — Aug 2025

- Shipped an internal RAG web framework service with LangChain, Supabase, Uvicorn/FastAPI, and React, reducing document lookup by ~3 hours/week through natural language dissemination and embedding-based retrieval.
- Implemented retrieval evaluation and logging to track top-k accuracy and latency, enabling iterative quality improvements through 2-week feature development sprints within an 8-week delivery window.

Software Engineering Intern, Fiore Industries, Albuquerque, NM Jun 2024 — Aug 2024

- Delivered a working RF-to-optical testing protocol and pipeline in 2 weeks using MPLAB and low-level C, automating signal sweeps and data capture for component validation of mission critical equipment.
- Authored repeatable evaluation procedures, improving test reliability and shortening debug cycles for hardware teams.

RESEARCH & PUBLICATIONS

“The Effect of Increased Dimensionality on Detecting Malicious IoMT Network Traffic” — J. Alonzo-Estrada, A. Mora, A. Avila, R. Basnet. Presented at MobiSec 2025, Sapporo, Japan; published by Springer.

- Benchmarked six ML models on the CICIOMT2024 dataset across packet-level (DPKT) and flow-level (CICFlowMeter) feature sets, quantifying accuracy-versus-compute tradeoffs for real-time IoMT intrusion detection.

LEADERSHIP EXPERIENCE

House Speaker, Associated Student Government, Colorado Mesa University May 2026 — Present

- Preside over the student House of Representatives, steering legislation from introduction through amendment, passage, or rejection while prioritizing communication between student government and the student body.

President, CMU Computer Science and Cybersecurity Club, Grand Junction, CO Aug 2023 — Present

- Built and operated a student high-performance, distributed-computing cluster to support coursework, experiments, and competition practice.
- Coached multiple competitive coding teams to national events with average top-10 placements.
- Partnered with a local cybersecurity firm for workshops and guest speakers, translating industry practices into club exercises.

EDUCATION

Major: Computer Science, Minor: Cybersecurity, Focus: AI Application, GPA: 3.56 Aug 2023 — Present

Colorado Mesa University, Grand Junction, CO, Expected Graduation: May 2027

- Captained coding and cybersecurity teams to multiple national competitions, achieving 4th in regional standings in the first year.
- Related coursework: Probability and Statistics, OOP & Design Patterns, Intro to Database, Intro to Algorithms, Python Machine Learning.

Thrive Scholars, Class of 2027 Jun 2022 — Present

- Selected for a multi-year career program; completed rigorous training in quantitative analysis, communication, and career readiness.
