

JAYDEN ALONZO-ESTRADA

AI Engineering, Cybersecurity, and Linux Systems

Grand Junction, Colorado | 808-491-5116 | jayden.alonzoestrada@gmail.com | j2a3e.com | linkedin.com/in/jayae

TECHNICAL SKILLS

AI Agent Orchestration	Python, C, TypeScript, React	Linux System Administration	PostgreSQL & Web Servers
REST APIs & Backend Services	Git, GitHub CI/CD & Releases	Zero Trust, PCI & HIPAA	SSH & Firewall Hardening
Stripe, Square, Authorize.net	Test & Eval Automation	HPC Cluster Operations	Project & Customer Coordination

PROFESSIONAL EXPERIENCE

AI Engineer, EggNest.ai, Grand Junction, CO Sep 2026 - Present

- Promoted from intern after a year of connector delivery; now own customer communications, project coordination in Productive and HubSpot, and VM provisioning for customer deployments.
- Built and distributed the team's multi-agent engineering setup: agent roles, hooks, an SSH rulebook, and an issue-burndown skill packaged as one verified plugin.

AI Services Intern, EggNest.ai, Grand Junction, CO Oct 2025 - Sep 2026

- Evolved the HubSpot connector into a deep CRM integration covering 11 object types with write actions and UAT agents so Glean can inspect and act on records; took a customer Zoho Desk connector from foundation to production.
- Ran audit-to-burndown pipelines as custom slash commands with agent teams: verified every CodeQL finding before filing 12 issues and 2 epics, merged 10 PRs closing all 9 targets, and shipped a connector with 225 passing tests; 158 commits and 25,900+ lines across 562 files in 21 working days, 29 of 31 sessions meeting goal.
- Standardized org-wide connector development with shared ConnectorLib skills (sync-readme, audit-issues, release-making, draft-commits, clear-datasource); administered the Linux servers, Lambdas, and databases behind the EggNest Portal, and drafted the company's HIPAA/PII compliance roadmap.

Software Developer (Independent Contractor), Rotary Club of Grand Junction, Grand Junction, CO Nov 2024 - Present

- Rebuilt the club's sweepstakes platform from scratch in three weeks (July 2026) on Next.js, TypeScript, Vercel, and Neon Postgres, replacing a 2020 student build on unpatched Node.js 10; migrated 38 charities, 5 sponsors, and historical ticket records intact.
- Scrubbed live credentials from git history, retired 689 password-less buyer accounts for throttled admin auth with per-page authorization, and made tickets issue only from signature-verified, duplicate-proof payment webhooks across Stripe, Authorize.net, and Square.
- Gated deployment on 96+ automated tests and Playwright checks, fixed nine pre-launch security-audit findings, and shipped training mode, member roles, and Excel export under a maintenance contract so the club runs the site itself.

Field Technician, Greenflare Technologies, Denver, CO Oct 2024 - Sep 2026

- Repaired and maintained high-throughput Linux compute systems in production, and diagnosed Ethernet bottlenecks with packet captures and targeted load tests, boosting network throughput by ~20% in high-traffic areas.

Software Engineering Intern, JGMS Government Services, Grand Junction, CO Jun 2025 - Aug 2025

- Shipped and operated an internal RAG service on Linux (FastAPI/Uvicorn, LangChain, Supabase PostgreSQL, React), reducing document lookup by ~3 hours/week for staff.

RESEARCH & LEADERSHIP

Student Research Head, Colorado Mesa University, Grand Junction, CO Dec 2023 - Present

- Lead a 6-person team building machine learning pipelines for IoMT intrusion detection and small cybersecurity language models; manage repos, sprints, code review, and experiment tracking for reproducibility.

President & Cluster Administrator, CMU Computer Science and Cybersecurity Clubs Aug 2023 - Present

- Built and operate a student Linux HPC cluster; run weekly packet-analysis and detection-engineering labs; coached teams to national events with average top-10 placements.

House Speaker, Associated Student Government (since May 2026); Treasurer, SHPE CMU Chapter Aug 2025 - Present

PUBLICATIONS

“The Effect of Increased Dimensionality on Detecting Malicious IoMT Network Traffic” by J. Alonzo-Estrada, A. Mora, A. Avila, R. Basnet. Presented at MobiSec 2025, Sapporo, Japan; published by Springer.

- Formulated and tested feature-dimensionality hypotheses by benchmarking six ML models on CICIoMT2024 across packet-level (DPKT) and flow-level (CICFlowMeter) feature sets, quantifying accuracy-versus-compute tradeoffs for real-time detection.

EDUCATION

B.S. Computer Science, Minor in Cybersecurity, Focus: AI Application, GPA 3.63 Aug 2023 - May 2027 (expected)

Colorado Mesa University, Grand Junction, CO. Springboard Fellow (2026); Thrive Scholar, Class of 2027; captained teams to national competitions.

Coursework: Probability & Statistics, OOP & Design Patterns, Databases, Algorithms, Python ML.
